Pseudo code : Calculate the average :-

The Inputs :-
num1 = 10
num2 = 20
num3 = 30

Expected output :-
avg. = 20.

1- get the numbers : (num1, num2, num3).

2- Store the values.

3- calculate the sum. of the numbers : (sum = num1 + num2 + num3).

4- store sum.

5- calculate the avg. → $avg = \frac{sum}{n}$ ⇒ n = numbers of values

6- set the numbers and calculate ⇒ $\frac{60}{3} = 20$.

7- store the output.

8- print the value.
